

Practice Transformation Initiative (PTN)

CCNC gives providers new tools and supports to help deliver high-quality, value-based care in an efficient practice setting.

Our Goal: Help ensure the viability of your practice under impending Medicare and Medicaid reimbursement changes

- **We can help you prepare your practice for value-based reimbursement**
 - Improve your practice's workflow and efficiency.
 - Provide Practice Transformation coaches – on-the-ground experts in quality improvement, process efficiencies, care coordination, and patient engagement.
 - Connect you with local and national physician leaders for collaborative learning.
 - Connect you with proven, practical tools to support practice transformation, optimize revenue and achieve sustained results, with free CME and MOC credit.
- **Leverage the power of informatics**
 - Connect your EMR to CCNC's Informatics Center for low-cost, comprehensive, hassle-free quality measurement and reporting.
 - Access patient registries needed to show "meaningful use," close care gaps, and enable rapid-cycle quality improvement efforts.
 - Identify which patients are most "impactable" through targeted interventions.
 - Track patient satisfaction through surveys your patients complete on tablets while they are in your office.
 - Analyze your practice's efficiency so you can reduce unnecessary testing, make smart referrals, and work more effectively with specialists.
- **Help you deliver "whole person care"**
 - Your most challenging patients likely have multiple chronic illnesses as well as behavioral health co-morbidities. Untangle their issues and prioritize treatments.
 - Your practice will be considered for inclusion as one of the 84 primary care practices selected as "behavioral health practice integration models" under the four-year cooperative agreement.
- **Clinical Pharmacy Integration**
 - UNC School of Pharmacy experts will work with you to streamline and ramp up team-based medication management strategies.
 - Integrate your medical home team with community pharmacists who have frequent contact with your patients and opportunity to engage them to improve compliance with your treatment recommendations.

Five Phases of Practice Transformation
